12. Backup & Restore (Local & Cloud)
13. Company Settings & Customization
14. Troubleshooting Common Issues
15. Support & Contact

1. Introduction & System Overview

Magochi-Pharmacy POS is a complete Point of Sale system designed for pharmacies and retail businesses. It handles inventory, sales, branch management, thermal receipt printing, cloud backups, and user roles — all in one desktop application.

Key Capabilities

- **Offline-first:** Works without internet; local database (SQLite).
- **Multi-branch:** Manage several locations from one installation.
- **Thermal printing:** Supports Windows, CUPS, network, and serial printers (including Chinese models).
- **Role-based security:** Super Admin, Manager, Cashier.
- **Backup & restore:** Automatic daily local backups + optional cloud backup.
- **Receipt history:** View, reprint, or PDF any past sale.
- **Customizable:** Company logo, theme color, receipt header/footer.

💡 **Pro tip:** The system can be adapted for any retail business (groceries, clothing, electronics) — contact developer for custom branding.

2. Installation & System Requirements

Minimum Requirements

- Windows 10/11 (or Linux/macOS with Python 3.8+)
- 4 GB RAM (8 GB recommended for large databases)
- 500 MB free disk space (grows with data)
- Internet connection (only for cloud sync/backup — optional)

Installation Steps (Windows .exe)

1. Download `pharmacy-pos-v0.11.exe` from the official website.
2. Double-click the installer and follow the setup wizard.
3. Launch the application from the desktop shortcut or Start Menu.

First Launch

On first run, the system automatically creates:

- A SQLite database file (`magochi_pharmacy.db`) in the installation folder.
- Default user accounts (see Section 3).
- A default branch named "Main Branch".
- A default receipt printer profile.

📌 **Note:** The application does not require administrator privileges after installation.

3. First Login & User Accounts

Login Screen

On startup you will see a two-tab window: **Login** and **Help & Info**. Use the credentials below to access the system.

Default User Credentials

Role	Username	Password	Permissions
Super Admin	`superadmin`	`SuperAdmin123`	Full system control, user management, all settings
Manager	`admin`	`admin123`	Stock, branches, sales, reports, receipts
Cashier	`cashier`	`cashier123`	Process sales only (POS tab, view products)

Changing Your Password

1. After login, go to **File** → **Change Password**.
2. Enter current password, then new password (minimum 4 characters).
3. Confirm and click **Update Password**.

⚠️ Keep your password secure. The super admin account cannot be deleted.

4. Dashboard Overview

The Dashboard (first tab after login) gives you real-time business metrics.

Statistics Cards

- **Today's Sales:** Total revenue from today's transactions.
- **Low Stock:** Number of products with quantity below 5.
- **Total Branches:** All branches configured.
- **Total Products:** Sum of all products in the current branch.
- **Today's Transactions:** Number of receipts issued today.
- **Active Users:** Users who logged in today.

Sales History Table

Lists recent sales with receipt number, date, product, quantity, amount, and cashier name. Use the date filter (Today, Yesterday, Last 7 Days, etc.) to narrow results.

💡 The dashboard auto-refreshes every 30 seconds. You can also click the 🔄 **Refresh** button.

5. Point of Sale (POS) Module

The POS tab is where you process customer purchases.

5.1 Product List (Left Panel)

- Shows all products in the selected branch with **ID, Product name, Stock quantity, Price**.
- Use **Search** field to filter products by name.
- **Double-click** any product to add it to the cart.

5.2 Shopping Cart (Right Panel)

- Displays items added: product name, quantity, unit price, line total.
- **Remove Selected** – deletes the highlighted row.
- **Clear Cart** – empties the entire cart.
- The **Total** label updates automatically (subtotal + tax).

5.3 Checkout Options

After reviewing the cart, choose one of three output methods:

- 🖨️ **Print Receipt** – sends receipt to a selected thermal printer.
- 📄 **Save as PDF** – creates a PDF receipt on the desktop.
- 📄 **Generate HTML Invoice** – opens a styled invoice in your browser.

When you click any checkout button, the system:

1. Deducts stock quantities.
2. Records the sale in the database and audit log.
3. Displays a confirmation with the receipt/invoice file location.

> 📌 **Tax calculation:** The default tax rate is 16% but can be changed in **Receipt Settings** (File → Receipt Settings).

6. Stock Management

The **Stock Management** tab provides full inventory control.

6.1 Add a New Product

1. Fill in: **Product Name**, **Barcode** (unique), **Quantity**, **Price (KES)**.
2. Select the **Branch** from the dropdown.
3. Click ➕ **Add Product**.

6.2 Update a Product

1. Select a row in the table below (single click).
2. Edit the values in the form.
3. Click ✏️ **Update Selected**.

6.3 Delete a Product

1. Select the product row.
2. Click 🗑️ **Delete Selected** and confirm.

6.4 Stock Table Columns

Shows: ID, Product, Barcode, Quantity, Price, Branch, Last Updated timestamp.

> Deleting a product is permanent and cannot be undone. Use the **Refresh** button to reload the table after changes.

7. Branch Management

Manage multiple store locations from one database.

7.1 Add a Branch

1. Go to **Branch Management** tab.
2. Enter **Branch Name**, **Location**, **Phone**.
3. Click ➕ **Add Branch**.

7.2 Switch Active Branch

Use the branch dropdown at the top-right corner (next to your username). Changing branch will reload products and dashboard data for that branch.

7.3 Update / Delete Branch

- Select a branch in the table → edit fields → ✏️ **Update Selected**.
- **Delete Selected** removes the branch and all its stock items (irreversible).

> 💡 Create separate branches for main store, warehouse, or pop-up locations.

8. Receipts: View, Reprint, PDF

The 📄 **Receipts** tab gives you full access to all past sales.

8.1 Search & Filter Receipts

- **Receipt No:** Partial or full invoice number.
- **Date From / To:** Filter by date range.
- Click 🔍 **Search** or 🔄 **Show All** to reset.

8.2 Receipt Actions

- **View Receipt Details:** Double-click any row or select and click the button → pops up a detail window with all items, totals, cashier, and branch.
- **Reprint Receipt:** Send the receipt again to a printer (select printer if multiple configured).
- **Generate PDF:** Save as a PDF file on your desktop.

📌 Receipts are stored forever. The application does not automatically delete old receipts.

9. Printer Setup (Thermal & Network)

The **Printer Settings** tab lets you configure receipt printers, especially thermal and serial models.

9.1 Add a Printer

1. Click ➕ **Add Printer**.
2. Give it a descriptive **Printer Name** (e.g., "Front Counter Thermal").
3. Select **Connection Type**:
   - `windows` – standard Windows printer (uses Notepad /p)
   - `cups` – for Linux/macOS CUPS system
   - `network` – IP/hostname printer (e.g., `192.168.1.100`)
   - `serial` – COM port (e.g., `COM3`). Requires pyserial library.
4. Enter the **Connection String** (printer name, IP, or COM port).
5. Click ➕ **Add Printer**.

9.2 Set Default Printer

Select a printer in the list → click **Set as Default**. The system will use this printer unless another is chosen during checkout.

9.3 Test Print

Select any printer → click **Test Print** → a sample receipt will be sent to verify configuration.

💡 For Chinese thermal printers (USB to serial), choose `serial` and use the correct COM port (e.g., COM3). Install drivers first.

10. Reports & Analytics

Generate professional sales and stock reports in HTML or PDF format.

10.1 Sales Report

1. Go to **Reports** tab (or menu **Reports** → **Sales Report**).

2. Select **From Date** and **To Date**.
3. Use quick selects: Today, Yesterday, Last 7 Days, Last 30 Days, This Month.
4. Click 📊 **Generate Sales Report** → an HTML report opens in your browser, showing a table, totals, and transaction count.
5. To get a PDF version, click 📄 **Generate PDF Report** (requires ReportLab library).

10.2 Stock Report

Click 📈 **Generate Stock Report** to view all products across branches, including total stock value and low-stock highlights.

10.3 Audit Log

Menu **Reports** → **Audit Log** shows every action (logins, sales, product changes, backups) with timestamp and user ID. Useful for security audits.

11. User Management & Roles

Only Super Admin can access user management. Go to **Admin** → **User Management**.

11.1 Add a New User

1. Fill in: Username, Full Name, Email, Phone, Password, Role (Manager / Cashier).
2. Click **Add User**.

11.2 Delete a User

Select a user from the list → click **Delete Selected User** → confirm. You cannot delete the superadmin.

11.3 Role Permissions Summary

- **Super Admin:** Full system access, user management, all settings, force sync, restore backups.
- **Manager:** Stock, branches, sales, reports, receipts, company settings, receipt settings.
- **Cashier:** POS tab only (cannot modify products, branches, or users).

12. Backup & Restore (Local & Cloud)

Data protection is critical. The system provides both automatic local backups and optional cloud backups (premium).

12.1 Local Backups (Free)

- **Automatic daily backup:** The system creates a `.db` file in the `backups/` folder every day.
- **Manual backup: File** → **Create Local Backup** or use the **Backup Manager** tab.
- **Restore from local backup:** In Backup Manager, double-click any backup file → confirm restore. The current database is backed up first.

12.2 Cloud Backup (Premium Feature)

If your organization has purchased cloud backup:

- **Automatic cloud sync:** Every 5 minutes the system checks API health and uploads new sales/logs.
- **Upload manually:** In Backup Manager, click ☁ **Upload to Cloud**.
- **Restore from cloud:** Click ⬇️ **Restore from Cloud** → the system fetches the latest backup and restores it (restart required).

⚠️ Cloud backup is NOT enabled by default. Contact developer at mwangikelvin278@gmail.com to activate (subscription fee applies).

13. Company Settings & Customization

Go to **File** → **Company Settings** to personalize your POS.

13.1 General Tab

- **Company Logo:** Upload a logo (shown on login screen and top bar).
- **Theme Accent Color:** Choose any color (buttons and highlights).

13.2 Organization Tab

- **Organization Name & Phone:** Used for cloud backup identification and API sync.

13.3 Receipt Settings

Go to **File** → **Receipt Settings** to customise the appearance of printed/PDF receipts:

- **Header Line 1 & 2:** e.g., store name and slogan.
- **Footer Message:** Thank you note or return policy.
- **Tax Rate:** Change from default 16% to any percentage.
- Live preview shows how the receipt will look.

💡 All settings are stored in the database and persist after restarts.

14. Troubleshooting Common Issues

Issue	Possible Cause & Solution
Cannot login	Check caps lock; use default credentials. If you forgot password, superadmin can reset, or re-install (database will be reset).
Printer not printing	Verify connection type and string. For USB thermal printers on Windows, use `windows` type and ensure the printer is set as default in Windows settings.
Low stock alert	Dashboard shows items below 5. Stock Management tab shows the exact quantity – reorder or update quantity.
Backup restore fails	Ensure the backup file is not corrupted and the application has write permissions to the installation folder.
Cloud sync error	Internet connection required. Contact developer if API status remains offline for > 1 hour.
PDF generation error	Install ReportLab: `pip install reportlab`. Without it, the system falls back to plain text.
Performance slow	Large databases (> 50,000 sales). Use the audit log cleanup (feature coming in premium) or contact support.

15. Support & Contact

For technical support, customization, or cloud backup activation, reach out to the developer directly.

Developer Information

- **Name:** Kelvin Magochi
- **Email:** mwangikelvin278@gmail.com
- **Phone:** +254718265708 (WhatsApp / Call)
- **Website:** www.webninjaafrica.com

Support Policy (Free Version)

- Email support is free for installation and basic troubleshooting.
- Custom modifications, cloud backup setup, and urgent support may attract a fee. Contact for quote.
- Premium upgrade includes priority 24h response and feature requests.

Where to Find Logs

Audit logs can be viewed in the application (**Admin** → **Audit Log**). Debug logs are stored in the installation folder as `error.log` (if generated).
